Experience

Company A – City, Region

Month Year – Present

Staff Software Engineer

- Chose [architecture] for [service] over [alternative] because [constraint]; split the migration into [stages] with [rollback condition].
- Defined [shared API contract] with [consumer teams]; migrated [N] integrations and kept [old behavior] working until clients moved.
- Traced [recurring outage] to [failure mode]; changed [isolation or recovery mechanism] and verified recovery with [failure test].
- Coached [engineers] through [design or on-call responsibility]; documented [decision process] they used to take ownership of [system].

Company B – City, Region

Month Year – Month Year

Senior Software Engineer

- Designed [service] for [peak load]; bounded [queue or resource use] so [dependency failure] did not exhaust [shared resource].
- Migrated [schema or datastore] with [dual-write or backfill method]; reconciled [records] before cutover and tested rollback.
- Removed [bottleneck] in [request path], reducing production p99 latency from [A] to [B] ms at [comparable load].
- Staged [release] behind [flag or canary]; paused rollout when [signal] crossed [threshold] and fixed [cause] before resuming.

Company C – City, Region

Month Year – Month Year

Software Engineer II

- Moved [slow operation] to [background worker]; made writes safe to replay and added handling for jobs that exhausted retries.
- Profiled [query] on [dataset]; changed [index or access pattern] and compared runtime on the same workload.
- Automated [manual workflow] with [validation check]; gave [operator] a way to inspect and rerun failed steps.

Company D – City, Region

Month Year – Month Year

Software Engineer

- Built [workflow] with recovery from [failed request]; preserved [user input or operation state] and tested retry behavior.
- Added [API operation] with [authorization rule]; tested permitted access and attempts to read another user’s records.
- Fixed [defect] caused by [state or timing condition] and kept the failing case as a regression test.
- Resolved [on-call incident], added an alert for [early warning signal], and tested the recovery steps with [teammate or exercise].

Experience Continued

Company E – City, Region

Associate Software Engineer

Month Year – Month Year

- Built [component] with [technology] for [workflow]; tested [acceptance condition] before release.
- Reproduced [defect] from [safe test case], fixed [cause], and added it to the test suite.
- Replaced [duplicated code] with [shared component]; checked that [existing callers] retained their behavior.

Skills

- **Languages:** [Language], [Language], [Language].
- **Frameworks & Libraries:** [Framework], [Framework], [Library].
- **Platforms:** [Cloud], [Runtime], [Database], [Messaging].
- **Tooling:** [Testing], [Observability], [CI/CD].

Education

Dalhousie University – Halifax, NS

BS Computer Science

January 2019 – December 2022

- Teaching Assistant for Server-side Scripting and Web Development.

Simon Fraser University – Vancouver, BC

Computing Science Coursework

May 2018 – December 2019
